What does 2 to 6 odds mean?
"What does 2
to 5 odds mean?"
Here we will tell you what 2 to 5 odds mean, what 2 to 5 probability means, and show you what a 2 to 5 odds payout would be. This means that out of 7 possible outcomes, odds are that there will be 2 of one kind of outcome and 5 of another kind of outcome. For every 7, odds are that 2 will be a particular event and 5 will be another event. There is a 28.57 percent probability of a particular outcome and 71.43 percent probability of another outcome. If you bet 1 on a game with 2 to 5 odds and you win, your total payout will be 1.40 which is your bet plus 0.40 profit. Note that odds and probability are not the same. Odds compare one event to another event, whereas probability compares one event to both possible events. Thus, when the odds are 2 to 5, the fraction for the Odds is $\frac{2}{5}$, but the fraction to calculate the probability is $\frac{2}{7}$. $A / B = \frac{2}{5} = \frac{2}{5A / (A + B)} = \frac{2}{(2 + 5)} = \frac{2}{7} = 28.57$
